FORAGE MOISTURE TESTER

590 FORAGE MOISTURE TESTER

SILAGES • BALAGE • HAY • HI-MOISTURE GRAINS
TMR'S • COMMODITIES • BY-PRODUCT

- Used for measuring various feedstuffs for moisture content & wet distillers.
- Four fan settings and variable heat control temperatures.
- 110 volt heavy-duty heating element. (220 Converter optional)
- Drying time forages: 20-30 minutes approximately depending on moisture.
- Electronic scales (9 volt & 110 volt) for easy reading and accurate measure. Test samples from 100 to 400 grams.
- One handle product basket. Easy to manage
- Energy saving tight fitting ring for basket. More heat directed to product to dry.

Advantages include:

1. Better control of dry matter intake in dairy rations especially in total mixed rations.
2. Cut down on over or underfeeding purchased proteins.
3. Can be used for immediate results and no waiting on Laboratory testing.
4. Recommended by leading Dairy Nutritionists.
5. Reliable, consistent, easy to use.
6. No charts to convert.
7. All moisture ranges.
8. All feedstuffs.

Easy-to-use forage moisture tester measures the moisture content of silages, balage, hay, high-moisture grains, total mixed rations (TMR), wet distiller's grains and more. Obtain reliable, consistent moisture content measurements for forages in approximately 20 to 40 mins. without using charts or waiting for lab results. High-moisture grain measurements take approximately 50 to 60 mins. Unit tests moisture content for all feeds across all moisture ranges. Includes 110-volt heater with variable heat control and four fan settings, produce basket and 6-lb. (3,000g) scale. Scale is powered by a 110-volt or three "AA" batteries (included). USA made.
